

Scaling of five solvers for the Laplace-Beltrami problem on a torus

exponents fitted on the largest half of the converged points; hollow markers ran out of their iteration budget

—●— MG standalone $N^{0.00}$
—●— CG + MG $N^{0.02}$
—●— CG + Jacobi $N^{0.50}$
—●— CG + SSOR $N^{0.47}$
—●— Direct (UMFPACK) $N^{0.00}$
